Results Interpretation

Level 15

Body Composition Analysis

Body weight is the sum of Body Fat Mass and Lean Body Mass, which is composed of Dry Lean Mass and Total Body Water.

Obesity Analysis

BMI is an index used to determine obesity by using height and weight. PBF is the percentage of body fat compared to body weight.

Segmental Lean Analysis

Evaluates whether the muscles are adequately developed in the body.

The top bar shows the comparison of muscle mass to ideal weight while the bottom bar shows that to the current weight.

ECW/TBW Analysis

ECW/TBW, the ratio of Extracellular Water to Total Body Water, is an important indicator of body water balance.

Visceral Fat Level

Visceral Fat Level is an indicator based on the estimated amount of fat surrounding internal organs in the abdomen. Maintain a Visceral Fat Level under 10 to stay healthy.

Results Interpretation QR Code

PREPARING FOR YOUR INBODY TEST

NAME:	James Jackson	DATE: _	9 23	2020	
Please chec	k if any of the following apply:				
	Are you pregnant? I look like I am.				
	Are you menstruating?				
	Do you have medical implants such as a pacemak life sustaining medical implants?	ker and/or o	other		
	Have you exercised within the last 6-12 hours?				
	Have you consumed alcohol within the last 24 ho	ours?			
	Have you consumed any caffeine today?				
	Have you eaten within the last 3-4 hours?				
Ø	Did you hydrate well the day before?				

To prepare:

Please use the restroom prior to your appointment to ensure LMC can obtain accurate measurements.
